Fictive research case

Group exercise

You are about to start a new research project, and your task is to identify some information sources and start to search for information. What do you do now?

Your group should not only present the results of the information searches, but also how it performed the searches, i.e. source selection, search strategies.

Choose one of the following fictive research subjects:

• Biotechnology: biosensors and future home health care technologies

• Construction engineering: ways of taking care of stormwater on urban areas.

• Energy conversion: energy conversion/energy efficiency and hospitals

• Food engineering: health effects of functional food in Japan

• Nanoscience and nanoengineering: nanoscience and new packaging materials

• Logistics: RFID (Radio Frequency Identification) and food industry
