Find references using search terms

Examples on how to write your search terms in the search box are written in bold letters. The search query is from January 2020.

To write all search terms in a row often results in a large number of results. Only one of the search terms are present in some of the results.

**Biosensors antibiotics milk** (1,3M results)

The results are ranked according to relevance. Use the relevance filter to the left to display the most relevant results. 264 of the results in the list are evaluated to be highly relevant of the 1,3M results in the search example above.

You can also filter and limit your results by publication year, language, concept, document type, substance role etc.

You can choose how to sort your list of results.

**Other ways to specify your search**

If you want all search terms to be present in the results write “and” between the words:

**Biosensors AND antibiotics AND milk** (221 results)

Search for synonyms and related terms by using OR. Use parentheses to group terms together:

**Biosensors AND antibiotics AND (milk OR dairy)** (233 results)

You can use several parentheses in the same search string:

**(Biosensors OR biosensing OR sensors) AND antibiotics AND (milk OR dairy)** (501 results)

Add an asterisk (*) to the end of a root word to retrieve word variations.

biosens* = biosensing, biosensor, biosensors

**Biosensors** (151 178 results)
**Biosens** (191 169 results)
**biosens** AND antibiotic** AND milk** (350 results)

To get fewer results use quotation marks for phrases.

"gas chromatography" (126 000 results )
**gas chromatography** (4,4M results)
